DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-9 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/619,061 and claims 1-10 of copending Application No. 10/348,375. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claimed triggered response composition claimed uses the same polyelectrolyte polymer blend as those in the copending claims. The crosslinked nature of the 2nd polymer is suggested in the claims in 10/619,061 by the incorporation of the crosslinking agents. The polyethylenically unsaturated monomer incorporated in the polymer blend of 10/348,375 suggests crosslinking.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Langley et al. US 5,744,152 or Sonnabend US 4,384,096 or Gassenmeier et al. US 2001/0031714.

6. Each of the cited patents teach "controlled" or "(physico)chemical switch" which use polyelectrolyte polymeric blends, see Sonnabend at columns 6 lines 7+, Langley et al. at col.4 lines 13+ and Gassenmeier et al. [0142].

7. These patents further suggest the polymer crosslinking as claimed, see Sonnabend at columns 7 lines 5+, Langley et al. at col.5 lines 38+ and Gassenmeier et al. [0143]. The difference between the claimed invention and the cited art is that the art fails to provide an example of the claimed polymers in combination in the weight

percentages. The claims are obvious from the art because of the clear suggestion to use the polymers in combination thus forming the claimed polyelectrolyte.
